Languages

Mandarin

Spanish

Skills

JavaScript / TypeScript

Next.js, NestJS

Python, Perl

PHP

GCP (Cloud Run, Cloud Build)

Cloud SQL

OAuth / JWT Authentication

Third-Party API Integrations

RESTful API

SQL (MySQL, PostgreSQL)

Docker, CI/CD

Ansible, Terraform

Linux (Ubuntu, OpenSUSE)

Jest, Playwright

API Testing (Postman)

Git, GitHub Actions

Open Source Contribution

Personal Statement

Full-stack developer and systems engineer specializing in electronic health record (EHR) platforms and healthtech infrastructure. Focused on building secure, scalable web applications and data architectures that support clinical care.

Work Experience

Software Engineer

Advance Northwest

Mar 2026 – Present | Omak, WA

- **Accelerated EHR MVP delivery:** Salvaged a stalled 6-month-old EHR codebase and successfully launched product MVP within 2 months of arrival.
- **Architected atomic form state management:** Refactored complex, distributed form submission from making 7-15 independent API calls to a unified, atomic transaction model.
- **Engineered multi-tenant GCP architecture:** Streamlined application maintenance and deployment workflows by migrating from fragmented per-organization API and frontend instances to a unified, centralized backend and frontend serving multiple isolated databases via domain-based routing.
- **Orchestrated legacy data migrations:** Engineered data cleaning pipelines using Perl to clean and normalize client health data and then load into Production GCP Cloud SQL instances.

Software Developer

Iconic Results

Sep 2024 – Mar 2026 | Phoenix

- **Built large-scale ETL pipelines** in Go and Perl to normalize millions of customer leads per year for Vicidial and internal systems.
- **Designed and deployed a fully automated Call QA platform** using Python, Faster-Whisper, LangChain, and the ChatGPT API—reducing manual QA workload by **80%**.
- **Developed and maintained internal web applications** using PHP, Perl, JavaScript/jQuery, React, and REST APIs; integrated Salesforce, Quickbase, Boberdoo, Ytel, TrustedForm, and Jornaya via REST/XML webhooks.
- **Created custom MySQL reporting and auditing tools** for compliance, performance tracking, and operational analytics; supported 20+ Linux servers and **200–300 concurrent Vicidial agents** with SIP/Asterisk debugging and database tuning.
- **Automated infrastructure and provisioning** using PXE-boot Linux images, FOG server deployment, Samba administration, Cron workflows, and vulnerability scanning via Vuls.
- **Investigated and resolved a security incident** by identifying a SQL injection attack through Apache logs, implementing prepared statements, and hardening privileged authentication.

Education

BA Anthropology/Minor Mandarin

Iowa State University

MBA Health Organization Management

Texas Tech University
